

NEKTON®-TONIC-F

For All Fruit-Eating Birds

The name NEKTON-TONIC covers 4 highly potent tonics, specifically balanced and blended to meet the nutritional needs of various types of birds and special types of reptiles.

NEKTON-TONIC-F for fruit-eating birds
NEKTON-TONIC-I for insect-eating birds
NEKTON-TONIC-K for seed-eating birds
NEKTON-TONIC-R for nectar and fruit-feeding reptiles

NEKTON-TONIC in all its forms is extremely valuable as an additive because it increases the nutritional value of usual animal diets considerably.

NEKTON-TONIC-F has been formulated according the latest results of scientific research and is suited to the dietary requirements of fruit-eating birds.

To be of any value to the body, a tonic must enter the blood stream and be distributed to all the living regions fast. By adding NEKTON-TONIC-F as a supplement you not only increase the nutritive value of the food but also provide a bird with all the necessary nutrients and effective substances without putting too much strain on the digestive organs.

This makes NEKTON-TONIC-F particularly valuable during such stress periods as illness, moulting, nesting, re-caging and acclimation, and has proved an excellent help in raising young animals. And you can use NEKTON-TONIC-F to get your bird in prime condition before shows or just to help it get over a show.

NEKTON-TONIC-F consists of more than 60 individual substances which, when put together, result in a particularly well-balanced tonic and dietary supplement.

NEKTON-TONIC-F contains:

CARBOHYDRATES to give the basal metabolism added energy and boost activity.

PROTEINS made out of the same vegetable matter the bird's organism is used to in its natural surroundings. In addition, 18 pure amino acids have been added to increase the nutritive value of the tonic impressively.

ESSENTIAL FATTY ACIDS, which a bird's organism definitely needs and which help prevent illnesses due to deficiencies.

VITAMINS AND PROVITAMINS, which are vital organic substances that must be present in a bird's diet if serious and irremediable illnesses are to be avoided.

MINERALS AND TRACE ELEMENTS. Even if a bird does not receive a sufficient supply of these vital substances regularly, its organism constantly secretes them all, so that any tonic has to have a high content of minerals and trace elements if it is to have any far-reaching effect. In this respect you can rely on NEKTON-TONIC-F completely.

However, the value of this first-class tonic does not lie alone in the presence of all these essential components, but above all in their balance. NEKTON-TONIC-F with its well-balanced composition of just the right components guarantees you the perfect tonic for your kind of bird.

USAGE:

NEKTON-TONIC-F is water soluble in powder form. Given two or three times a week either in water or over soft food in addition to the drinking water, it helps prevent all those illnesses due to deficiencies. In times of stress it is advisable to add daily to counteract the effects of the moult, re-caging, shows or acclimation.

AS LIQUID ADDITIVE TO DIET

Dissolve 20 ml = 10 g NEKTON-TONIC-F in 100 ml water (or 1 part TONIC-F to approx. 3 1/3 parts water to make a slurry) and serve in a separate bowl.

When hand-raising young birds the solution can be fed into the beak by using an eye-dropper or straight into the crop by means of a tube or needle. As soon as the birds are weaned onto a spoon, 10 - 15 days old, a certain amount of roughage such as boiled rice should be added.

The NEKTON-TONIC-F solution should be given in addition to the drinking water enriched with NEKTON-S. In exceptional circumstances and for three days at the most, however, the NEKTON-TONIC solution alone can be given to ensure that the pet is getting a sufficient amount of TONIC in the particular stress situation.

If possible, please ensure that the drinking bowl or dispenser is completely sterile. If you use our disinfecting fluid, DESI-PLUS, for feed and drinking dispensers, you have the assurance that the solution will keep 24 hours. Otherwise only make up enough solution for 6 - 8 hours need.

ADDED TO FOOD

Sprinkle NEKTON-TONIC-F powder over soft food or fruit. We recommend approx. 20 ml = 10 g NEKTON-TONIC-F to 100 g = 3½ oz food. Please make sure your bird has enough NEKTON-S-fortified drinking water at hand.

Important

Store in a cool, dark and dry place. In an unopened container and correctly stored the vitamins in NEKTON-TONIC-F remain effective until date of expiry, see extra label.

NEKTON-TONIC-F is available in various sizes.
