

NEKTON®-Desi-Plus

Disinfectant for pet food and drinking vessels

DESI-PLUS is no less important than any other product in the NEKTON range of pet care items. It is a final disinfectant for pet toys and vital for pet food and drinking vessels.

Logically, the first things our pets come in contact with are their food and drinking bowl or feeder. It is therefore extremely important that these utensils are as clean and germ-free as is at all possible if we want to keep our pets healthy.

Unfortunately cleaning is just not enough to ensure that these utensils are really sterile, and as they are usually made of plastic they cannot be boiled.

NEKTON-Produkte, however, knows how important germ-free feeding utensils are for your pets and has developed DESI-PLUS to help you achieve this with the least possible effort and no danger to the life or health of either you or your pet.

A good disinfectant must fulfill three essential conditions - and DESI-PLUS comes up to the mark, as you will see below.

1. The agent must be completely effective at low temperatures.
* Cold water can be used to dilute DESI-PLUS, and you still get full results.

2. The agent should work quickly and effectively.
* It takes DESI-PLUS only two hours to achieve full results.

3. The agent should work effectively without any damage to items or their users.
* DESI-PLUS achieves full results on practically all kinds of pet care items without endangering your pet's life or damaging the article.

Today any responsible and caring animal lover regards the use of DESI-PLUS as a disinfectant as a natural part of his true pet care - like giving his pet the right diet and keeping it in the right surroundings. And in the case of illness or when rearing young animals it is a real must to keep risk of infection low. Bird lovers in particular should keep DESI-PLUS in mind, as bird feeding and drinking bowls are generally hard to clean. Owners of humming or sun birds, fruit eaters and softbills in particular should see that all their pet's feeders etc., are sterile as germs form easily in this kind of food.

DESI-PLUS is formulated on the basis of cold sterilization, a principle that has been used world wide for more than 40 years and has proved effective in hospitals and households, especially for sterilizing babies' bottles and dummies.

DESI-PLUS has been used for many years by serious animal lovers and responsible zoological and scientific institutes as well as well-known national and international animal parks and zoos. As always you can be sure that DESI-PLUS is yet another tried and proven NEKTON product.

USAGE

DESI-PLUS is in concentrated form and must be diluted before use.

Using a suitable dish, tub or suchlike kept especially for this purpose, add 10 ml = 2 full bottle caps DESI-PLUS to every 2 liter (approx. 4 pints) of water in the cleaning bowl.

Clean the utensils and toys as usual and immerse in the DESI-PLUS solution for at least two hours, taking care that no air bubbles form on items to be sterilized. Cover container. After prescribed time, remove and allow to drain dry - do not rinse or towel dry. All items are now germ-free and ready for use.

The easiest method of achieving germ-free utensils round the clock is to alternate between two sets, leaving one set of feeding and drinking bowls, bird bath, toys and so on in the solution overnight. This way your pet can start the day in healthy and germ-free surroundings.

Quite a number of animal lovers have told us they use a 1 : 1 DESI-PLUS solution to clean their bird cages or perches and cages for hamsters, mice, rabbits etc..

Once the solution is made up, it will keep for up to a week, provided the utensils are cleaned thoroughly first and the solution is kept covered at all times. When the solution begins to lose its smell it is also losing its strength, so increase the immersion period (two hours) a little more every day.

Important

Only use on rust-proof metal and avoid splashing leather and textiles as DESI-PLUS could remove color.

Do not use or mix with vinegar, household chemicals or products containing ammonia or acid as this could release hazardous gases.

DESI-PLUS could irritate eyes or skin. Wash skin thoroughly after contact or rinse out eyes and get in touch with your ophthalmologist.

KEEP AWAY FROM CHILDREN!
