

NEKTON®-Cat-V

A Vitamin Supplement Enriched with Arginine and Taurine
For Cats

NEKTON-CAT-V is a pet food supplement for cats. It contains the entire range of vitamins a cat's organism needs in times of duress in a well balanced formula. In addition the essential amino acids Arginine and Taurine have been added to cover a cat's special nutritional needs.

Cats have unique nutrient requirements that can only be obtained through eating animal flesh, but meat alone does not contain the right balance of minerals or all the vitamins the animal needs. In their natural surroundings cats cover these needs by eating their prey completely including organs and contents of the stomach. The canned, dry or semi-moist cat food given to domestic cats or even your own "home-made" diet can only approximate a cat's natural diet unless it is complemented by the correct nutrients. It has been proved that commercial cat foods as well as most pet owners' "formulas" more or less lack certain essential ingredients cats need to stay healthy. The diet has to be completed, therefore, by adding supplements. This is particularly important in times of stress. During shows, transport, acclimation, gestation, lactation, illness and medical treatment a cat's health becomes increasingly dependent on a complete supply of all the valuable nutrients it needs.

NEKTON-CAT-V's formula has been developed with just such situations in mind. The high proportion of vitamins ensures coverage of the increased requirements and supports smooth functioning of the metabolic processes.

Never make the mistake of thinking you can give your cat dog food. There are a number of differences in the nutrient requirements of dogs and cats. Dogs eat both animal and plant foods but cats are carnivores = animal eaters. The main differences lie in the protein and vitamin metabolisms, and in addition cats cannot synthesise all the components they need to stay healthy. These factors have all been taken into account in NEKTON-CAT-V and are the reason the formula particularly includes the vitamins A, B₁ and folic acid as well as the essential amino acids arginine and taurine. Furthermore, thiamine (vitamin B₁), the most important water-soluble for cats, often loses its effectiveness when the food is not prepared correctly or the ingredients have been stored for too long; another reason for adding it to the diet.

A deficiency of these nutrients can lead to symptoms resembling poisoning, causing the true cause, malnutrition, to be overlooked. A deficiency in vitamin A or folic acid can lead to reduced fertility or development disorders in embryos and kittens. Deficiencies in the indispensable amino acids arginine and taurine can result in salivation, vomiting, muscle tremors, nervous disorders and eye defects which may even end in blindness.

Used daily or as remedial treatment NEKTON-CAT-V can

- supplement nutrients and cover requirements in the diet,
- improve condition,
- strengthen the body's resistance, and
- maintain good health in periods of physical stress.

In other words, NEKTON-CAT-V supports and promotes your cat's health.

Usage and Dosage

As a powder supplement NEKTON-CAT-V can be easily mixed with the cat's food and its taste adds to the palatability. NEKTON-CAT-V should be added daily to the food or at certain intervals as remedial treatment.

Using the enclosed measuring spoon add for:

Adult cats	1 spoonful per day
Kittens/lactating and pregnant cats	2 spoonfuls per day
Older cats	1 spoonful one day and 2 spoonfuls every day

Keep strictly to these doses.

Please note

Because of this supplement's higher content of vitamin D than in a complete feed, it may only be added to 6% of a cat's daily ration.

INGREDIENTS: See label.

IMPORTANT

Keep NEKTON-CAT-V in a cool, dark and dry place. In an unopened jar and correctly stored, the vitamins in NEKTON-CAT-V remain effective until the date of expiry given on the extra label at the least.

NEKTON-CAT-V is available in various sizes.

Other products in the NEKTON-CAT series

NEKTON-CAT-M is a highly valuable combination of minerals, trace elements and numerous vitamins and complemented by the essential amino acids arginine and taurine. It is formulated to cover a cat's basic requirements in nutrients and should be given daily.

NEKTON-CAT-H is a supplement containing all the essential vitamins and mineral elements plus a high proportion of biotin to counteract deficiency defects of the skin and fur.
